

REPORT ON NOISE MEASUREMENTS

for the period SEPTEMBER - DECEMBER 2017

1. TRAFFIC FIGURES - aircraft movements

Information on aircraft movements in the last four months show a slight increase, compared to the same time period last year. There were 11.463 aircraft movements, which is 5,3% more compared to the same time period last year. The data are:

- 3.028 aircraft movements in September, which is 8,3% less compared to the same time period last year,
- 3.321 aircraft movements in October, which is 19,2% more compared to the same time period last year,
- 2.680 aircraft movements in November, which is 13,8% more compared to the same time period last year,
- 2.434 aircraft movements in December, which is 0,3% less compared to the same time period last year.

* landing or takeoff of aircraft

** commercial, business and private aircrafts and helicopters which have a maximum of 19 seats and do not exceed the weight of 44 tons

***school, position or technical flights (without passengers)

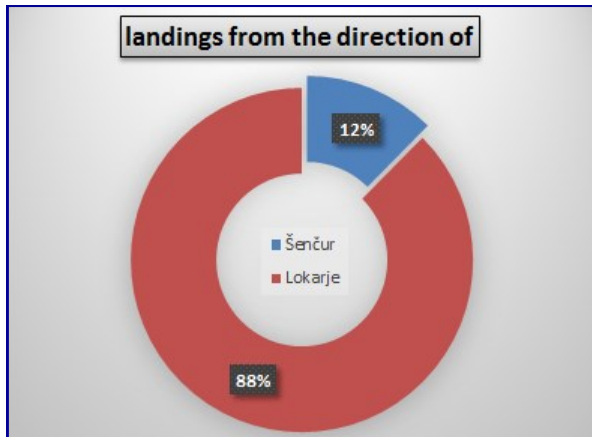

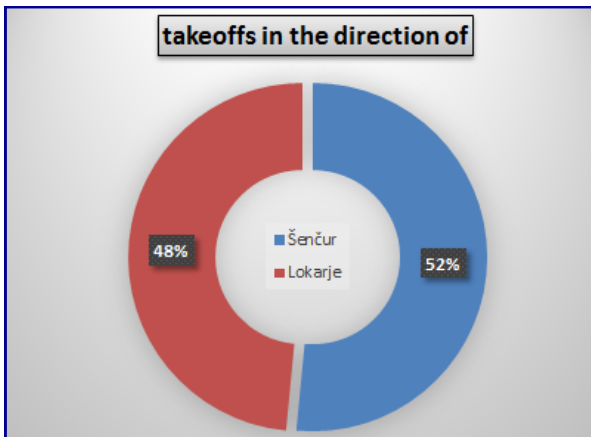

2. NOISE POLLUTION SOURCE DATA - measuring terminals´

In the last four months of this year measuring terminals have taken 10.887 operations* (5.394 takeoffs and 5.493 landings) into account. Overflights of school aircraft flights and most of military and police helicopter flights are not included in this number.

The share of takeoffs in the direction of Šenčur was 52% and the share of landings from the direction of Šenčur was 12%; also in the direction of Lokarje 48% and from the direction of Lokarje 88%.

Including the overflights, the measuring terminals have taken 11.377 operations into account, of which 3.485 (31%) operations are the takeoffs and landings in/from the direction of Šenčur and 7.402 (65%) operations are the takeoffs and landings in/from the direction of Lokarje. The number of other events, related to overflights of school aircraft flights and military and police helicopter flights, is 490 (4%).

* Note: 5.0% of operations is not included due to uncertainty of data – the impact on the result of noise is negligible < 0,22 dB(A)

Source: ZVD Institute of Occupational Safety d.o.o.

3. MEASUREMENT RESULTS - noise indicators

The following environment noise indicators were calculated in the last four months of this year, based on the measured noise data of individual events, associated with air traffic (takeoffs, landings, overflights of aircrafts):

Measuring terminal	Noise indicators [dB(A)] - monthly average																Limit values [dB(A)]			
	September				October				November				December				Decree on limit values for environment noise indicators			
	L _D	L _E	L _N	L _{DEN}	L _D	L _E	L _N	L _{DEN}	L _D	L _E	L _N	L _{DEN}	L _D	L _E	L _N	L _{DEN}	L _D	L _E	L _N	L _{DEN}
1 Šenčur I.	57	56	47	58	57	55	46	57	57	54	45	57	56	53	45	56	58	53	48	58
2 Lokarje	53	52	46	55	53	51	45	54	51	51	46	54	51	50	45	53	58	53	48	58
3 Kranj	53	51	44	54	53	51	43	54	53	51	44	54	53	50	44	54	58	53	48	58

The table shows the daily calculated noise indicators:

- **Indicator L_d** in dB(A) shows the daily noise load, due to the air traffic. The day time lasts between 6⁰⁰ and 18⁰⁰. Depending on the number of noise events at each measuring point, we determined the average hourly noise load, on the basis of data on noise levels in dB (A) and the duration of the events t(s), which was sent to us as measurement data, by the measuring terminal. We use this hourly noise load for determining individual noise indicator.
- **Indicator L_e** in dB(A) shows noise load, similar to the L_d indicator, but at evening time that lasts between 18⁰⁰ and 22⁰⁰. This is the time period when people are more susceptible to the disturbance. Therefore, 5 dB (A) is added during this time period.
- **Indicator L_n** in dB(A) describes the night time that lasts between 22⁰⁰ and 06⁰⁰. It is assumed that the population, around the airport (or other noise sources), is resting during this time period. Disturbances during this time period may have a profound impact on health and relaxation. Therefore, 10 dB (A) is added during this time period.
- **Indicator L_{den}** in dB(A) represents the total daily noise load.

Regarding the seriousness of the excess, we marked the excessive noise indicators with a green highlighted print, for excesses up to 3 dB (A), with a blue highlighted print for excesses between 3 and 6 dB (A) and with a red highlighted print for excesses over 6 dB (A). A research on the noise pollution source is carried out for all the red and blue markings.

NOTE: average noise values are determined in accordance with the requirements of the Decree on limit values for environment noise indicators (OG RS No. 105/2005, 34/2008, 109/2009 in 62/2010). Calculations are based on measured noise levels sent from different measuring terminals. They measure total noise and overflight noise of each aircraft. Weather conditions have a partial impact on results, which we are trying to eliminate as far as possible. The wind and thermal inversion still have a partial impact on the measuring results. Based on the SIST ISO 1996-2 standard, data have the uncertainty of about 3 dB (A), since it is not possible to completely exclude the effects of weather conditions (rain, wind, thermal inversion). This means that the actual result varies within -3 and +3 dB (A) of the written.

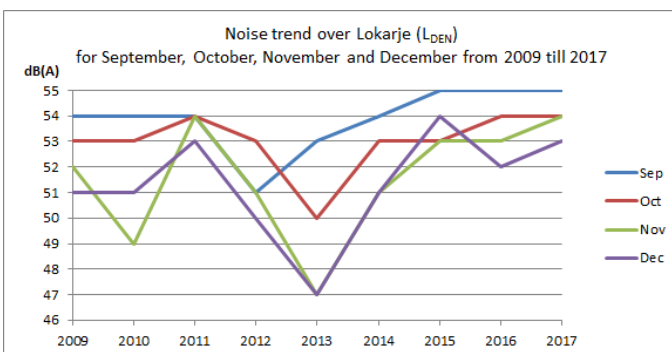

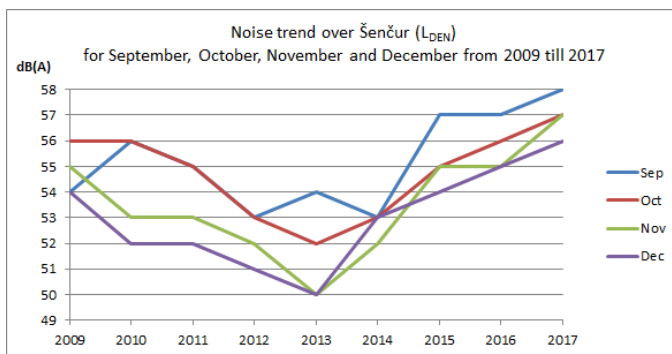

4. ANALYSIS - the loudest aircrafts and noise trend

The following events, in conjunction with takeoffs and landings, were the loudest in the last four months of this year:

Šenčur I. overflight measurements			
Aircraft type	arrival (ARR) / depart. (DEP)	Date and time of the event	Current noise level EPNL in dB(A)
Antonov AN-124	DEP	14.10.2017 21:51 duration of the event 51 seconds	114
Alenia ATR 72	ARR	11.10.2017 8:56 duration of the event 28 seconds	100
Boeing 737F-400	DEP	29.11.2017 20:50 duration of the event 38 seconds	99
Boeing 737-800	DEP	5.11.2017 11:53 duration of the event 37 seconds	99
Boeing 737-800	ARR	2.11.2017 14:48 duration of the event 24 seconds	98
Airbus A321	DEP	11.10.2017 10:40 duration of the event 31 seconds	99
Piper PA-28	ARR	10.10.2017 15:59 duration of the event 33 seconds	99
Boeing B737-800	DEP	20.10.2017 12:52 duration of the event 34 seconds	98
Boeing B737-800	DEP	12.11.2017 11:40 duration of the event 38 seconds	97
Airbus A321	DEP	23.11.2017 9:52 duration of the event 41 seconds	97

Lokarje overflight measurements			
Aircraft type	arrival (ARR) / depart. (DEP)	Date and time of the event	Current noise level EPNL in dB(A)
Antonov AN-12	DEP	6.12.2017 18:48 duration of the event 25 seconds	98
Diamond DA42 Twin Star	ARR	27.11.2017 12:57 duration of the event 56 seconds	97
Airbus A330-200	DEP	15.9.2017 18:28 duration of the event 39 seconds	96
Antonov AN-12	DEP	6.10.2017 16:21 duration of the event 24 seconds	96
Airbus A330-200	DEP	14.9.2017 9:35 duration of the event 34 seconds	95
DHC-8-400 Dash 8Q	ARR	20.11.2017 13:05 duration of the event 39 seconds	95
Airbus A319	DEP	18.9.2017 22:18 duration of the event 32 seconds	95
Airbus A319	DEP	1.9.2017 12:58 duration of the event 34 seconds	94
Pilatus PC-6 Turbo Porter	ARR	2.10.2017 13:22 duration of the event 37 seconds	94
Airbus A319	DEP	12.9.2017 7:55 duration of the event 30 seconds	94

The trend of noise changes over Šenčur and Lokarje from 2009 to 2017:
